EXAMINER

DAVIS, DAVID DONALD

ART UNIT PAPER NUMBER

2652

DATE MAILED: 06/09/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/027,046

Applicant(s)

SHUKH ET AL

Examiner

David D. Davis

Art Unit

2652

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 February 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) 19 and 23 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18, 20-22, 24 and 25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Election/Restrictions

1. Claims 19 and 23 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim.

Applicant timely traversed the restriction (election) requirement in the reply filed on February 14, 2005.

2. Applicant's election with traverse of claims 1-18, 20-22 and 24-25 in the reply filed on February 14, 2005 is acknowledged. The traversal is on the ground(s) that examination is not a serious burden. This is not found persuasive because the claims are patentably distinct.

The requirement is still deemed proper and is therefore made FINAL.

3. This application contains claims drawn to an invention nonelected with traverse in a communication received February 14, 2005. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Specification

4. The disclosure is objected to because of the following informalities:

a. On page 5, line 10 "an" should --a--.

b. On page 15, in the first full paragraph, the following is stated:

The non-magnetic layer can be formed of a non-magnetic dielectric material or a multi-layered non-magnetic material including a conductive layer (such as 240) sandwiched between insulating layers (such as 242 and 244). The thickness of the

Art Unit: 2652

non-magnetic layer is greater than one micrometer and preferably less than five micrometers.

On page 5, lines 8-11, the following is stated: "FIG. 5 is a cross-sectional view of a read/write head in accordance an embodiment of the invention. FIG. 6 is an [sic] simplified layered diagram of the read/write head of FIG. 5 as viewed from the recording medium." Figures 5 and 6 are separate embodiments as disclosed by the specification and shown by the figures.

Appropriate correction is required.

Claim Objections

5. Claims 7 and 8 are objected to because of the following informalities: In line 1 of claim 7, "1" should be --3--. In line 1 of claim 8, the second occurrence of "the" should --a--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 7-16, 20-22, 24 and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin (2003/0043513). As per claims 1, 10, 14 and 15, 21-22 and 25, Lin shows in figure 3 and describe in section [0020] a head for use with a magnetic medium 17 moving in a

Art Unit: 2652

first direction. The head includes a perpendicular writing element having a main pole 22 having a main pole tip 28. A return pole 23, also shown in figure 3, is connected to the main pole 22 at a back gap 35 and having a return pole tip positioned from the main pole 22 in the first direction. A write gap is between the main and return poles, and a conductive coil 11 adjacent the main and return poles with an area of a magnetic medium 17 facing surface of the main pole tip 28 being less than an area of a magnetic medium 17 facing surface of the return pole tip.

A reading element is positioned in a second direction that is opposite the first direction from the perpendicular writing element and including a top shield 26, a bottom shield 16 in the second direction from the top shield 26, and a read sensor 15 positioned between the top and bottom shields.

As per claims 2 and 11, Lin discloses in section [0021] that the main and return poles are formed of a magnetically permeable material selected from a group consisting of CoZr, CoZrNb, $\text{Ni}_{45}\text{Fe}_{55}$, FeN, FeAlN, cobalt-iron (CoFe), cobalt-nickel-iron (CoNiFe), nickel-iron (NiFe), and iron (Fe). As per claim 3, Lin shows in figure 3 a non-magnetic layer 32 separating the top shield 26 from the writing main pole 22. As per claims 7 and 16, Lin discloses in section [0021] that the non-magnetic layer is approximately 1 micrometer or greater. As per claims 8 and 12, Lin discloses in section [0022] that a gap layer 33 defines the write gap of approximately 1 micrometer or less. As per claims 9 and 13, Lin discloses in section [0001] and [0002] a disc drive storage system including the head described supra. As per claim 24, the magnetic medium is formed on a disk, as disclosed in sections [0001] and [0002] of Lin.

Art Unit: 2652

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 4-6 and 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin (2003/0043513). Lin discloses the claimed invention. See description, supra.

However, Lin is silent as to the non-magnetic layer being formed of silicon oxide, silicon nitride, aluminum oxide or tantalum oxide. Lin is also silent as to the non-magnetic layer being formed of a conductive layer sandwiched between insulating layers with the conductive layer being copper, aluminum, tantalum, or tungsten.

Official notice is taken of the fact that a non-magnetic layer being formed of silicon oxide, silicon nitride, aluminum oxide or tantalum oxide or a conductive layer sandwiched between insulating layers with the conductive layer being copper, aluminum, tantalum, or tungsten is notoriously old and well known in the magnetic head art.

Art Unit: 2652

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to specify that a non-magnetic layer of Lin is formed of silicon oxide, silicon nitride, aluminum oxide or tantalum oxide as taught in the art.

The rationale is as follows: one of ordinary skill in the art at the time the invention was made would have been motivated to specify that a non-magnetic layer is formed of silicon oxide, silicon nitride, aluminum oxide or tantalum oxide, which is well within the purview of a skilled artisan and absent an unobvious result, because of the known insulative properties of the insulative layer.

It also would have been obvious to a person having ordinary skill in the art at the time the invention was made to specify that a non-magnetic layer of Lin be formed of a conductive layer sandwiched between insulating layers with the conductive layer being copper, aluminum, tantalum, or tungsten as taught in the art. The rationale is as follows: one of ordinary skill in the art at the time the invention was made would have been motivated to specify that a non-magnetic layer is formed of a conductive layer sandwiched between insulating layers with the conductive layer being copper, aluminum, tantalum, or tungsten, which is well within the purview of a skilled artisan and absent an unobvious result, because of the known conductive properties of the conductive layer.

Response to Arguments

10. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2652

Conclusion

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David D. Davis whose telephone number is 571-272-7572. The examiner can normally be reached on Monday thru Friday between 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa T. Nguyen can be reached on 571-272-7579. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
